TRANSMITTAL OF INFORMATION DISCLOSURE STATEMENT

Dear Sir:

Transmitted herewith is an Information Disclosure Statement disclosing information which has come to the attention of applicant and/or his attorneys and is being submitted so as to comply with the duty of disclosure set forth in 37 C.F.R. § 1.56. In accordance with 37 C.F.R. § 1.97(b), the enclosed Statement is being filed within three (3) months of the filing date of the above-identified application or before the mailing date of a first Action on the merits.

Neither applicant nor his attorneys make any representation that any information disclosed herein may be "prior art" within the meaning of that term under 35 U.S.C. § 102 or §

103. Moreover, pursuant to 37 C.F.R. § 1.97, the filing of this Information Disclosure Statement shall not be construed as a representation that a search has been made or as an admission that the information cited herein is, or is considered to be, material to patentability as defined in 37 C.F.R. § 1.56(b).

In accordance with 37 C.F.R. § 1.98, transmitted herewith are:

1. A completed copy of Form PTO/SB/08a "Information Disclosure Statement by Applicant" listing the patents, publications and other information being submitted for consideration; and
2. A legible copy of each patent, publication and other item of information in written form listed on the enclosed Form PTO/SB/08a.

NON-ENGLISH INFORMATION

Pursuant to 37 C.F.R. § 1.98, following is a concise explanation of the relevance (as it is presently understood by the individual designated in 37 C.F.R. § 1.56(c) most knowledgeable about the content of the information), of each listed patent, publication or other information that is not in the English language:

1. Chinese Patent Application No. 2547076Y published April 23, 2003 discloses: An image scanner for exciting fluorescent light as top light source which coats a fluorescent layer on the button of a top cover and installs an exciting fluorescent light generator in an optical module of the scanner. When a transparent document is placed on an original carrying surface of the scanner, the exciting fluorescent light generator generates an exciting fluorescent light to excite the fluorescent layer to generate a fluorescent light, the fluorescent light transmits through the transparent document and is reflected by mirrors inside the optical module and received by an image sensor. The optical module can be installed a reflected light source therein to provide light source for scanning reflective document.

2. Chinese Patent Application No. CN2280391Y published April 29, 1998 discloses: A single light source type transmissive-reflective scanner image scanner which uses a light source to scan reflective and transparent document, using a splitter which can partly reflecting and partly transferring light there through, and comprising a movable shielding cover. All optical elements are fixed. The images of transparent document and reflective document use the reflecting light (or transmissive light) from the light source, a set of reflecting mirrors and the

splitter into the image sensor. It can reduce the scanner volume and elements assembling cost to get a higher image quality.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "E. R. Witt", written over a horizontal line.
